DETAILED ACTION

Allowable Subject Matter

Claims 1, 4-7 are allowed.

The following is an examiner's statement of reasons for allowance:

English et al, US PG-PUB No. 2003/0036374 A1, discloses "Wireless local area network using impulse radio technology to improve communications between mobile nodes and access points." English does not teach or fairly suggest the following features, which are recited in the independent claim 1 of the present application:

An apparatus for use by a wireless device in a wireless communications environment including multiple access points and stations, wherein stations gain network access by associating with one of the access points, comprising a logic for ascertaining, by the wireless device, whether the wireless device should attempt to associate with an alternative access point operating on a second channel, the ascertaining logic employing, at least in-part, indications of signal strengths of transmissions from the alternative access point, and technology type employed by the alternative access point; *wherein the logic for ascertaining obtains an indication of expected data rate of service by the alternative access point, and ascertains that the wireless device should attempt to associate with the alternative access point operating on said second channel if the alternative access point on said second channel has a greater expected data rate than an actual data rate provided by the current access point as recited in claim 1.*

Claims 4-7 are allowed because they depend on claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
